

Guidelines for Opening

Requirements of the Israeli Government for Quarantine upon Entering the Country

1 Each institution will have a contact person in charge of the group of students going into quarantine [upon entry]. This person will be responsible for their wellbeing as well as for maintaining contact with officials from the Health Ministry.

2 The student's arrival in Israel will be conditional on them signing a consent form. In the case of a minor, consent has to be given by the parent or guardian. The form states that the undersigned agrees to adhere to all restrictions or guidelines and agrees to comply with all conditions of isolation. It also absolves the government of any liability.

3 Students arriving at the airport will be transported to the location in which they will quarantine—directly from the airport in a vehicle designated for them only. No other forms of transportation are permitted.

4 The approved bubble size for quarantine is up to six people only.

5 The quarantine rooms shall be completely separated from the area of residence of students not in quarantine.

6 In each room, the students should be housed with a distance between the beds of at least two meters.

7 Each quarantine bubble will be assigned a separate toilet and shower.

8 The institution must provide all food needs, garbage removal and laundry to the quarantined group throughout the quarantine period. Each group will have its own kitchen and can't share it with other groups under any circumstances.

9 A student who does not feel well or develops symptoms of coronavirus will contact his institutional contact immediately, and the institution will take care of transferring him to proper medical care based on his condition.

10 In case a student has COVID-19 symptoms, all the responsibility falls on the institution in which the student is enrolled. He and each of the other students from that bubble will have to separately isolate for 14 days and report to the Health Ministry.

11 Each of these students will be given an informed consent form detailing the medical implications of group quarantine, and they will be informed of the status of the student who has shown symptoms. Any outbreak could lead to the closure of an institution, and any such decision will be made by the government.

12 In the event of the closure of the institution or a failure to open for any reason, the institution will be responsible for the care and needs of its students.
